Bright start in electrical field

By JAKE DEAN

LAST year Mark van Kruyssen was busy completing his SACE and now he is working on the \$10 million desalination pilot plant at Port Stanvac.

Mr van Kruyssen, 18, of McLaren Flat, is an electrical apprentice with O'Donnell Griffin, a leading Australian electrical engineering and contracting business.

His job involves wiring a range of equipment including flow meters and working with the desal plant's computer system.

"It's pretty technical and hard to explain but basically it's a computer system that runs the plant," he said.

He got the job last June through ATEC Group training after completing SACE at the Australian Technical College,

Christies Beach.

At the ATC he tried different trades such as building and construction before settling on the electrical industrial field.

"I'm a hands-on person and working outdoors is awesome, so that's why I chose it," he said.

Mr van Kruyssen said he also benefited from the ATC learning environment. "It was good to finish my SACE and be able to start a trade at the same time.

"The relationship you have with your teacher at the college is very different, it's much more of an adult talking to another adult." To find out more about the Australian Technical College - Adelaide South, at Christies Beach, visit <http://www.atc-as.com.au/>
